ID	Summary of Issues Raised	Council Response	Changes Proposed
1, 8, 13, 14, 15, 16, 18, 19, 20	9 respondents considered that the assessment methodology was inadequate or insufficiently detailed.	The SHLAA is a high level assessment of the likely potential capacity for new housing development. The level of detail is based on the methodology established by Roger Tym and Partners, approved in July 2010 following consultation in April 2009 and applied to data from 2008, 2011 and 2012. More detailed requirements could only be applied once a more detailed site proposal was available. Responses to detailed points are provided below.	Paragraph 2.6 and footnote 3 have been amended to further clarify the role and status of the SHLAA
	Requests that full consideration be given to biodiversity; geodiversity; landscape character and quality; flood risk; and green infrastructure. Sites important to legally protected species should be excluded unless the developer can show that development will not harm individual animals or the status of the species in the local area. Work on the LCR Ecological Framework should also be taken into account.	The revised methodology already takes account of open space and biodiversity and geodiversity in line with existing policies (Table 3.2 and Table 3.3 and following) and already applies a lower score to sites at greater risk of flooding (Table 3.9). Wider green infrastructure requirements and the consideration of more specific impacts, including the national sequential test to direct development to areas at lower risk of flooding, would need to be applied when a planning application was submitted or when land allocations were being considered as part of a site-specific Local Plan. The Ecological Framework is already identified as a material consideration in the emerging Core Strategy Local Plan.	Paragraph 3.23 has been added to provide additional information on the protection to be given to supported habitats and paragraph 4.6 amended to better reflect the approach towards floodplain and supporting habitats.
	The impact of development on scheduled ancient monuments; historic parks and gardens; listed buildings and conservation areas needs to be considered. Non-designated features of local and historic or architectural interest should also be considered as these can make an important contribution to creating a sense of place.	The methodology already takes account of the potential impact on designated and non-designated heritage assets (Table 3.5 and following). Any more detailed impacts will need to be assessed in line with national policy and the local Development Plan, when a planning application is submitted or when land allocations were being considered as part of a site-specific Local Plan.	No change
	Welcomes the inclusion of the impact on designated recreational open space in revised methodology but would wish to see private and publicly owned playing fields assessed in accordance with paragraph 74 of the National Planning Policy Framework (NPPF).	The revised methodology already seeks to score sites for their likely impact on designated open spaces (Table 3.2 and following). A revised Playing Pitch Strategy is currently being prepared but will only be available for more detailed consideration as part of a future review of the SHLAA.	No change

	within 400m walking distance of an existing centre or high frequency public transport corridor as it is inappropriate to apply a rigid checklist to assess sustainability. The criteria set out in the NPPF should be applied. The profit on Gross Development Value should be nearer 20%.	Core Strategy Local Plan, which seeks to direct development to the most sustainable locations. The figures for development surplus reflect the findings of the Council's Viability Study, based on stakeholder workshops held in June and September 2013 (paragraph 3.64 refers). 15% profit has been applied below 25 units, with 20% for larger schemes.	
4, 5, 6, 7, 9, 11, 12, 17	8 respondents did not have any specific comments in relation to the SHLAA but wished to be kept informed of future consultations.		
	Supports the exclusion of sites in Flood Zone 3b.  Development should be directed away from areas of highest risk of flooding. Where development is necessary, development should be made safe without increasing flood risk elsewhere.	Support noted. Flood risk will continue to be assessed, in detail, when a planning application is submitted and/or through a site-specific Local Plan, in line with the Core Strategy Local Plan.	No change
	No specific comment to make but would emphasise the need to take cross country pipelines into consideration when assessing sites for development.	Pipelines would be considered as a ground condition constraint under Table 3.8 of the methodology.	No change
	Requests full consideration for biodiversity; geodiversity; landscape character and quality; green infrastructure; access to the countryside and other open space; and impacts on National Trails and networks of public rights of way.	The revised methodology already takes account of open space and biodiversity and geodiversity in line with existing policies (Table 3.2 and Table 3.3 and following). Wider, more detailed, requirements will need to be assessed when a planning application is submitted, in line with national and local policies.	No change
	The Marine Policy Statement provides guidance on planning activity that includes a section of coastline or river.	Any specific impacts will need to be assessed when a planning application is submitted and/or through a site-specific Local Plan. The Core Strategy has already been amended to draw attention to the Marine Policy Statement.	No change
	Wishes to be kept informed of any future proposals which may impact on the current rail network.	Respondent will continue to be informed of future consultations, as part of the Council's mailing list and in line with Schedule 5 of the Town and Country Planning (Development Management Procedure) (England) Order 2010.
